

Comprehensive Analysis: COT, Context Type, and Correction Effects

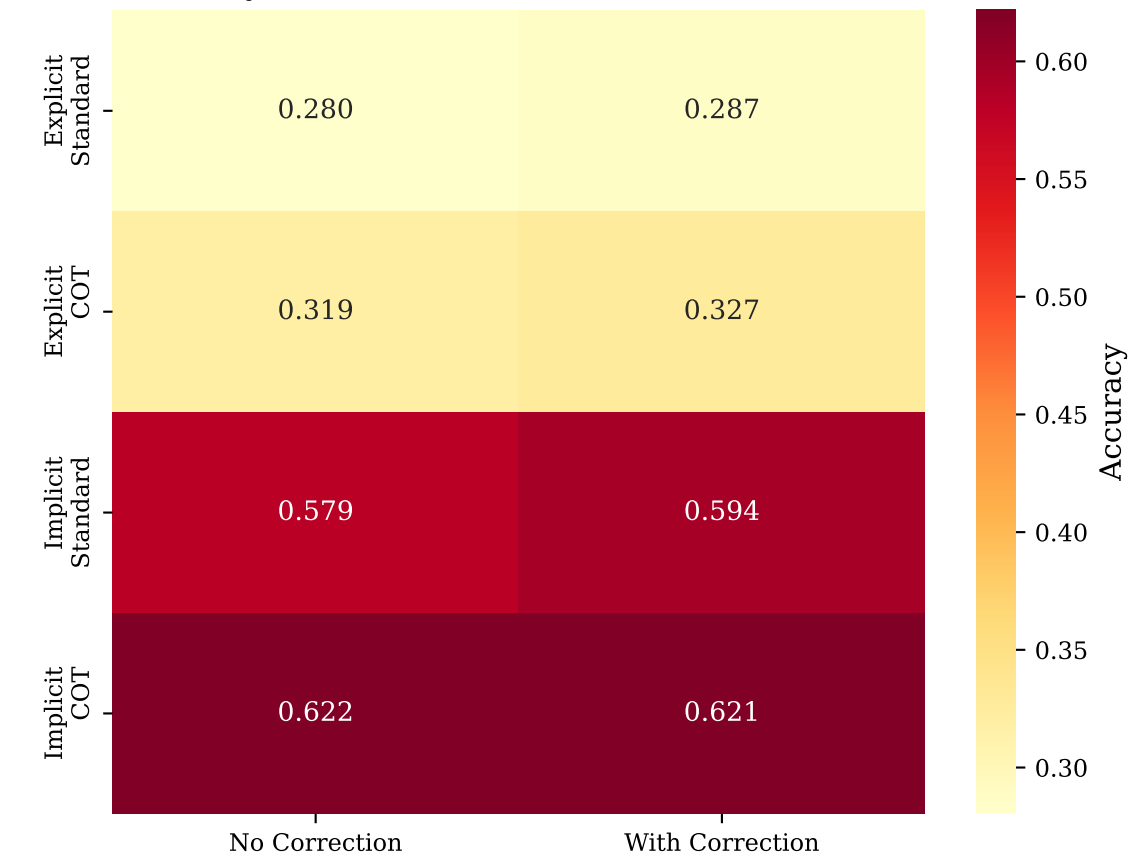

COT Benefit by Context Type

Correction Benefit by Context Type

Three-Way Interaction: Context × Method × Correction

Key Findings Summary

- Chain-of-Thought Effect:**
 - COT: 0.472
 - Standard: 0.435
 - $\Delta = +0.037$ (COT better)
- Context Type Effect:**
 - Implicit: 0.604
 - Explicit: 0.303
 - $\Delta = +0.301$ (Implicit easier)
- Correction Feedback Effect:**
 - With Correction: 0.457
 - No Correction: 0.450
 - $\Delta = +0.007$
- Relative Effect Sizes:**
 - Context Type: 0.301 (largest)
 - COT: 0.037 (5.2× correction)
 - Correction: 0.007 (smallest)
